

# Project Title: **Safe Kids**

18<sup>th</sup> December 2018

**Course No. : CSE 332**

**Course Title: Software Engineering Lab**

## **Submitted By**

Aisha Khatun

Reg no: 2015331042

Course: CSE 332

## **Submitted To**

Md Saiful Islam

Assistant Professor,

Department of CSE, SUST.

## **OVERVIEW**

The internet is an open place. Perhaps too open for children below a certain age. Safe Kids is a chrome extension with the aim to keep kids safe from internet harms by automatically blocking harmful, abusive and violent webpages. Additionally it blocks web searches containing words that might bring up violent webpages, images etc. This will help parents or guardians to protect their underaged kids from viewing unhealthy internet contents, which kids stumble upon quite often.

## **GOALS**

1. Prevent entering harmful websites
2. Prevent searching with “bad” words
3. Password protected to prevent uninstall
4. Manual addition of websites
5. Manual un-blocking of sites that seemed potentially harmful but are really not.
6. Replace/remove bad words from approved sites

---

## REQUIREMENTS

1. Html
2. CSS
3. Javascript
